The Administrator
Washington, D.C. 20201

Dear Colleague,

The Health Care Financing Administration (HCFA) has begun its 1995 Flu Immunization Campaign. I am pleased to provide you with a summary of information on influenza immunizations paid for by the Medicare program in 1994. This book is part of HCFA's continuing effort to educate the public about Medicare services and to encourage beneficiaries to use these services to improve their health.

As you review the data, a caution should be kept in mind: These numbers reflect only influenza vaccinations given to Medicare beneficiaries age 65 years and older in the fee-for-service sector and for which Medicare was billed in 1994. They do not include persons enrolled in health maintenance organizations (HMOs) or other managed care settings. In addition, many community-based immunization programs are free to the recipient and do not generate a Medicare bill. Therefore, in some parts of the country, local immunization rates that reflect all of the immunizations for all of the elderly may differ from the ones reported here.

A disturbing pattern continues to emerge from this information. In 1993, the first year that Medicare covered influenza vaccines, and again in 1994, beneficiaries of African-American descent were half as likely to have been immunized against influenza as Caucasian beneficiaries. We have observed the same pattern in a number of other services provided under Medicare. We encourage communities, as well as individuals, to enhance their efforts to reach these underserved Medicare beneficiaries in the 1995-1996 flu season.

Unfortunately, at the present time we are unable to provide accurate information on minorities other than African-Americans. We are continuing our work in this area. With the assistance of our colleagues in the Public Health Service and in State health departments, we plan to provide this information as soon as it becomes available in future summaries of the influenza immunization rates.

I would like to thank our partners throughout the Public Health Service, particularly the Centers for Disease Control and Prevention, for their support and participation. Further, I want to thank the HCFA components, especially the Regional Offices, for their assistance with this effort. Credit also goes to our partners in the private sector who helped to distribute information and organize influenza immunization campaigns.

I feel certain that as we strive to reach our beneficiaries with this extremely important public health message and benefit, we will see more progress towards the "Healthy People 2000" Goal. I look forward to your continued support in the 1995 and future campaigns.

A handwritten signature in black ink, reading "Bruce C. Vladeck".

Bruce C. Vladeck

1994 Influenza Immunizations Paid for by Medicare: Overview and Technical Notes

Overview

The data reported here reflect the second year of claims experience since HCFA began reimbursing providers for influenza vaccine and its administration on May 1, 1993. Approximately thirty-eight (38) percent of Medicare beneficiaries age 65 years or older in the fee-for-service sector received an influenza vaccination in 1994 that was paid for by HCFA. This finding indicates an attainment of more than half of the Department of Health and Human Services Year 2000 goal to achieve a 60 percent influenza immunization rate for all persons age 65 years or older. It also represents an increase of more than 1 million flu shots paid for by Medicare in 1994 compared to 1993.

The national influenza vaccination rate for African American beneficiaries is approximately one-half the rate for Caucasian beneficiaries. There is no substantial variation in rates by gender. However, immunization rates are lowest for those beneficiaries age 85 years and older.

Description of Tables

The data book provides national, State and county level rates of influenza immunizations paid for by Medicare for beneficiaries in the fee-for-service sector. The maps included in the data book have the rates reported as integers for ease of presentation. Rates are reported to one tenth of one percent (one decimal place) in the tables. For accuracy, the rates reported in the tables should be used in additional calculations.

Following the presentation of the national rates, the data book is organized alphabetically by State, with three (3) tables for every State. Table 1 compares the State's rates and numbers of influenza immunizations for both 1993 and 1994 according to age, gender, and race. The first table also indicates a percent change in rate representing the relative increase (or decrease) in the rate of immunization for the two years compared. The percent change in rate is a ratio with the numerator equal to the difference between the rates for 1994 and 1993 and the denominator equal to the 1993 rate.

For each State, Table 2 provides the county-level figures used in calculating influenza immunization rates reported in the third table. Table 2 reports the number of elderly enrolled in Medicare Part B fee-for-service, as well as the number of individuals who received flu shots in 1994 according to race. Table 3 provides corresponding county-level immunization rates for 1993 and 1994 according to race. Because county-specific rates may be unstable for counties with small numbers of beneficiaries, comparisons of 1993 and 1994 rates should be done with caution.

Puerto Rico has been included in our analysis for the first time in 1994. One table of county-level figures is included for Puerto Rico. To allow an accurate comparison of 1993 and 1994 national rates, Puerto Rico is not included in the 1994 national totals.

Technical Notes

The 1994 data presented in this document were developed using the same analytic specifications as the data for the 1993 report. Therefore, it is possible to make relatively accurate comparisons between these two years for influenza immunizations paid for by Medicare.

Data were derived from the Medicare National Claims History File for all services provided between September 1 and December 31, 1994 for influenza vaccinations given to Medicare beneficiaries age 65 years and older. In both years, bills were counted if they were submitted by

March 31st of the next year, or December 31st of the same year in the case of the institutional outpatient services. Over 10 million claims were identified for the analysis.

HCFA data include rates for all beneficiaries in the fee-for-service sector. As with the 1993 data, the current data for 1994 exclude Medicare beneficiaries receiving their medical care through managed care organizations. These providers cover approximately 6 percent of Medicare beneficiaries and do not submit claims for specific services, including flu vaccinations.

Also, rates are summarized by Caucasian and African American race. Rates for members of other racial/ethnic groups were not available for this data book. HCFA is currently striving to improve its ability to study utilization among other minority groups. Efforts are being made to include rates for other racial/ethnic beneficiaries in future reports.

- **Limitations of HCFA's Data**

Public health clinics, health fairs, and some hospitals may not bill Medicare for influenza vaccinations provided to Medicare beneficiaries. Since HCFA data are based on submitted claims, providers at such locations that do not bill Medicare are under-reported in this data book. The extent of these services may be substantial, particularly in states or counties with significant public health and outreach activities.

As noted, HCFA data do not include Medicare beneficiaries enrolled in HMOs or the immunizations they received. If a significantly higher number of HMO beneficiaries were provided influenza immunizations, the Medicare influenza vaccination rate for all beneficiaries combined (HMO and non-HMO enrollees) would be higher than what we report for the fee-for-service sector.

Some influenza immunizations are provided in January or February during a given "flu season", or billed after the "flu season" or cut-off period has ended. HCFA data do not capture vaccinations provided after December 31, 1994, or billed after March 31, 1995 (or December 31, 1994 for the institutional outpatient files).

- **Comparisons with other Data Sources**

Data from the Medicare Current Beneficiary Survey indicate that 10 to 20 percent of Medicare beneficiaries may have received influenza immunizations in 1993 that were not billed to Medicare. Data from the 1993 National Health Interview Survey also indicate a higher overall influenza immunization rate for persons age 65 and older (52 percent) than HCFA data demonstrate. However, that survey did corroborate our finding of a substantially lower (32 percent) influenza immunization rate for African Americans.

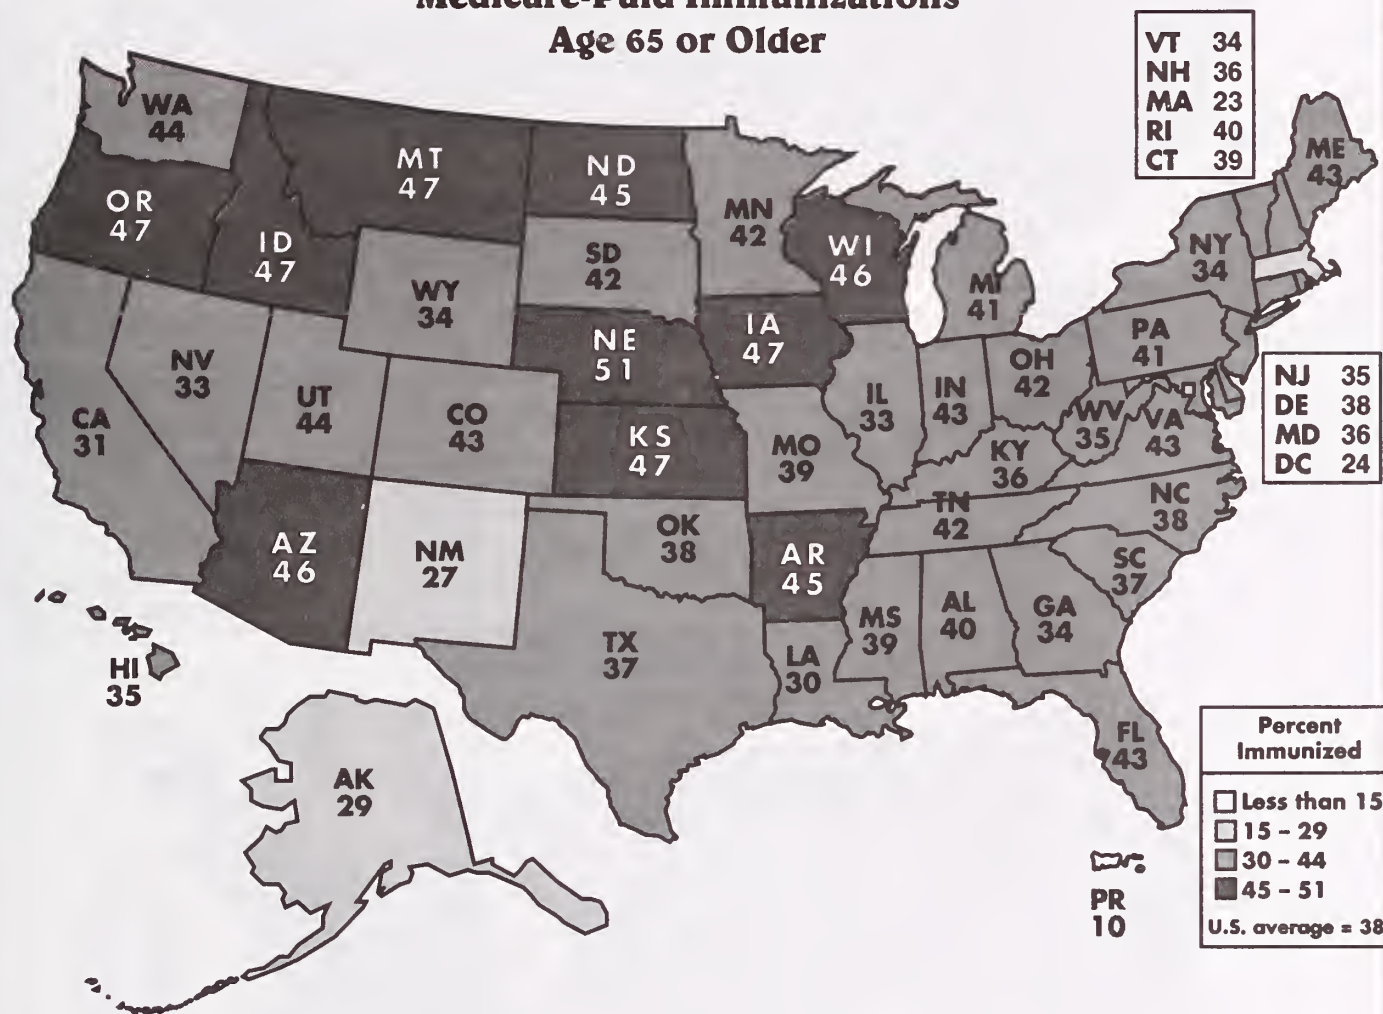

Sources of Additional Information

Additional information and hard copies of this data book can be obtained by calling HCFA's Statistical Information Hotline at 410-786-3689. In addition, tables from this data book can be accessed through the INTERNET at the following address : <http://www.ssa.gov/hcfa/hcfahp2.html>.

1994 INFLUENZA IMMUNIZATIONS PAID FOR BY MEDICARE

Percent of All Beneficiaries With Medicare-Paid Immunizations Age 65 or Older

These data reflect claims paid by Medicare for non-HMO beneficiaries only. Total immunization rates may be higher in those areas with free or publicly-supported programs.

Health Care Financing Administration

The Health Care Financing Administration was created by the Secretary of Health, Education and Welfare on March 9, 1977 to administer the Medicare program, the federal portion of the Medicaid program, and related quality assurance activities.

Medicare

Medicare provides health insurance coverage for people 65 and over, younger people who are receiving Social Security disability benefits, and persons who need dialysis or kidney transplants for treatment of end-stage kidney disease.

Medicaid

Medicaid, which provides health care coverage for the poor, is administered by the states with matching funds from the federal government. Federal law mandates coverage of basic health care services for categories of low-income people. States have the option of covering other needy people and providing medical services not mandated by federal law.

Health Standards and Quality

- HCFA is responsible for implementing federal quality assurance standards in more than 140,000 laboratories, 16,500 nursing homes, 6,500 hospitals, and nearly 7,000 home health agencies as well as more than 12,500 ambulatory surgical centers, hospices, and 25,000 other facilities.
- State inspection teams working under agreement with HCFA conduct surveys of health care providers and suppliers to ensure compliance with federal standards for health, safety, and quality of care. Followup inspections are performed when necessary to bring facilities into compliance. Approximately 5,700 state surveyors perform the inspections, and their work is monitored by approximately 100 HCFA surveyors.

- Peer Review Organizations in every state operate under contracts with HCFA to ensure that the medical services provided to Medicare patients in hospitals and certain outpatient settings are medically necessary, appropriate and meet acceptable quality standards.

For Greater Efficiency in Health Care

- HCFA is rapidly increasing use of electronic technology for all phases of claims processing to reduce administrative costs.
- HCFA is pursuing several initiatives to achieve savings and prevent fraud and abuse in the purchase and rental of durable medical equipment (DME) by Medicare beneficiaries. Four regional carriers specialize in processing DME claims.
- HCFA in 1992 implemented an historic change in the Medicare method for paying physicians. Medicare is paying physicians according to a fee schedule based on the work and overhead costs associated with each medical service. This replaced a payment system based on historic charge patterns.
- The Prospective Payment System legislated in 1983 reduced the growth rate of Medicare outlays for hospital inpatient services. This system pays hospitals a fixed amount per patient based on diagnosis. Hospitals have responded by operating more efficiently, controlling costs without reducing the quality of care.
